

# Life Cycle Management in NATO

## LCM in an Era of Reform and Transformation

Despite streamlined investments in the acquisition of new weapon systems by the nations, NATO's core tasks have remained to focus on Territorial Defence, Crisis Management and Cooperative Security. As a result, the objectives include the investment in more deployable and usable forces by exploiting the full range of capabilities utilising the entire spectrum of multinational cooperation. Major efforts in acquisition and logistics are currently subject to an extensive reform process in NATO, the nations and the industrial base. Systems Life Cycle Management (SLCM) can be a major enabler in support of the accomplishment of these objectives and - furthermore - can be the link and provide interfaces to modern and effective programme management and best practices in nations and industry. Setting the right priorities, pooling and sharing capabilities and the establishment of closer links with the private sector represent indispensable elements of NATO's road map towards more efficiency and more effectiveness.

Against this background, the 8<sup>th</sup> NATO Life Cycle Management Conference will provide a platform for the presentation of innovative approaches and concepts in support of effective materiel management ensuring the required performance and quality in a timely manner and within budget.

In addition to specialist presentations and papers the conference will provide ample opportunity for the exchange of ideas and information between and among technical experts, programme managers and decision makers from the nations' armed forces, defence administration and industry.
